Bing: A 120 Warm Air Furnace

Heat pumps typically produce air that is about 90-100°F, whereas furnaces can produce air as high as 120-125°F. The fix: Nothing. This is normal for heat pumps. As long as the thermostat is reaching the temperature you set it at, it's working fine. There's a problem with your filter. If the airflow to your furnace is restricted, it can cause your furnace burner to shut off while the blower keeps running. This will make the air only lukewarm (or cold).

A-120 Warm Air Furnace - Keystoker

A furnace return system must collect all the air being put out by that system. If the furnace is putting out 1,000 cubic feet per minute of air flow, the return system must collect 1,000 cubic feet and take it back to the unit. An insufficient return system or one too large will reduce the efficiency of the heating and increase energy bills.

Keystoker A-120 Coal Hot Air Furnace

Old vs Modern Warm Air Heating Systems. It was back in the 60s and 70s when the use of warm air boilers and heating systems peaked. Much of this though, has largely been replaced by water-filled radiator systems. However, there are still a number of the older warm air systems around; and those who have them have little to complain about.
