An overview of the procedure for pushover analysis is given as follows: Create the computational model. Create the computational model, without pushover data, using conventional modeling techniques.; Define properties for pushover hinges using Define > Section Properties > Hinge Properties. Hinges may be defined manually or by using one of several default specifications which are available.

Analysis Pushover Sap Example - vitaliti.integ.ro

Pushover is a static-nonlinear analysis method where a structure is subjected to gravity loading and a monotonic displacement-controlled lateral load pattern which continuously increases through elastic and inelastic behavior until an ultimate condition is reached. Lateral load may represent the range of base shear induced by earthquake loading, and its configuration may be proportional to the ...

The mean spectra in Fig. 6 (b) are used for the pushover analyses. The displacement demands from the push-over analysis are compared with the mean values of the maximum displacements from dynamic analysis. The period T_s for the 5% spectrum is 0.4 seconds. This is between the 0.3 and 0.45 second periods of the example structures B1 and B2.

Example posted by: Laura Eads, Stanford University. This example is an extension of the Pushover Analysis of 2-Story Moment Frame and Dynamic Analysis of 2-Story Moment Frame examples which illustrates the explicit modeling of shear distortions in panel zones and uses reduced beam sections (RBS) which are offset from the panel zones. Both pushover and dynamic analyses are performed in this example.

The pushover analysis is performed using a displacement-controlled static analysis. In this example, the structure was pushed to 10% roof drift, or 32.4". The roof node at Pier 1, node 13 in Figures 1 and 2, was chosen as the control node where the displacement was monitored. Incremental displacement steps of 0.01" were used.
