common ancestor: the birds and the bananas, the fishes and the flowers -- all related. Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".

Charles Darwin and His Voyage Aboard H.M.S. Beagle

Charles Darwin's theory of evolution by natural selection is the foundation upon which modern evolutionary theory is built. The theory was outlined in Darwin's seminal work *On the Origin of Species*, published in 1859. Although Victorian England (and the rest of the world) was slow to embrace natural selection as the mechanism that drives evolution, the concept of evolution itself gained widespread traction by the end of Darwin's life.

Bing: Charles Darwins The Origin Of

Darwin's "The Origin of the Species" brought about skepticism all throughout the scientific world. Darwin's research downplayed creationism as he believed that pure evil and pure good were simply nonexistent. Since men were no more than evolved monkeys, a God or divine being was not part of the creation process.
