The abundance of problems of in-creasing complexity gives students confidence in their problem-solving ability as they work their way from the exercises to the design and computer-based problems. It is assumed that instructors (and students) have access to MATLAB and the Control System Toolbox or to LabVIEW and the MathScript RT Module.

Control System Problems: Formulas, Solutions, and Simulation Tools Next we apply transformations 1 and 3 to the loop that contains the transfer function as feedback and get the following block diagram:  $X(s) H_3(s)$  Similarly, by applying transforms 1 and 3 we obtain the simplified block diagram that represents the system's transfer function.  $X(s)$

Problems with Management Control Systems. Despite of the benefits, there are some issues with the implementation of management control system in an organization. They are: Magnitude of Change. Management control system is designed to cope with changes of a limited magnitude. While designing the control system certain assumptions are made concerning the variables expected to change and the degree of change.

General method. Optimal control deals with the problem of finding a control law for a given system such that a certain optimality criterion is achieved. A control problem includes a cost functional that is a function of state and control variables. An optimal control is a set of differential equations describing the paths of the control variables that minimize the cost function.

Solution. The system involves one integrator and two delayed integrators. The output of each integrator or delayed integrator can be a state variable. Let us define the output of the plant as  $x_1$ , the output of the controller as  $x_2$ , and the

output of the sensor as  $x_s$ . Then we obtain  $2I+J++p+ st5 t$  Controller Plant Sensor Example Problems and ...
