Embedded Software Development For Safety Critical Systems

Safety-critical software systems are developed within a risk-based framework: the regulatory framework requires the assessment and mitigation of all reasonably foreseeable risks prior to placing the products on the market. A risk assessment includes the determination of key hazards, risks, failure modes, and mitigations, for software where the device risks have to be linked to software items.

The Power of 10: Rules for Developing Safety-Critical Code

The design of the APIs, using safety critical constraints, sets the foundation for higher level software and serves as a system design constraint set to ensure safety critical operation. Without a set of safety critical APIs, the system design challenge is multiplied, and system verification is made more complex and risky.
