Genes Make Proteins Cells use the recipes written in your genes to make proteins - just like you use recipes from a cookbook to make dinner. Proteins do much of the work in your cells and your body as a whole. Some proteins give cells their shape and structure. Others help cells carry out biological processes like digesting food or carrying ...

Did My Genes Make Me Do It: And Other Philosophical ...

A gene is the basic physical and functional unit of heredity. Genes are made up of DNA. Some genes act as instructions to make molecules called proteins. However, many genes do not code for proteins. In humans, genes vary in size from a few hundred DNA bases to more than 2 million bases.

All your cells contain the same genes, but cells don't make all the proteins they have genes for. Thus, what makes a liver cell different from a brain cell is which proteins it makes—and therefore, which of its genes are turned on. A schematic drawing of a gene including these features looks like a ribbon divided into segments. ...

23andMe - Genetics 101: What are genes?

My Genes Made Me Do It! is a pseudoscientific book by Neil Whitehead arguing that homosexuality is 'not genetic' and thus is behaviorally conditioned — therefore, homosexual tendencies can either be increased or eliminated based on behaviors. Whitehead has been accused of publishing "junk science" motivated by a Christian "fundamentalist moral crusade".

Your Genes, Your Health

Genetic testing looks at your genes to check for any mutations. The test is done with a sample of blood, saliva, or tissue. There are several reasons why you might do genetic testing. To diagnose a disease or a type of disease. To determine the cause of a disease.
