### Rheological Properties of Cosmetics and Toiletries ...

The knowledge about how ingredients in formulation can influence the texture profile is an important factor on the development of a cosmetic product. In this context, the aim of this work was to evaluate the effect of vegetable oils in the texture profile, rheological and sensorial properties of cosmetic formulations based on organogel. Methods

### Cosmetics and physical chemistry - ScienceDirect

Rheological investigation of cosmetics and pharmaceuticals. The rheological characteristics of cosmetics and pharmaceuticals are important for production, packaging, filling, and storage. Customers appreciate the sensation of a skin cream when applied; they want the toothpaste to remain on the brush after squeezing it out of the tube, and they want medicine in the optimal condition to take effect wherever it should.

### Rheological Additives for Cosmetic Applications

RHEOCIN is a hydrogenated castor oil derivative designed for use in cosmetic and personal care systems as a thixotropic gellant for oil phases. Rheological control with RHEOCIN provides excellent thickening effect and pigment suspension. The efficiency of RHEOCIN is sensitive to temperature and system polarity.

## **The Cosmetic Chemist**

In the cosmetic industry, the main application of clay minerals is as an excipient to adjust the rheological properties and to stabilize emulsions by avoiding coalescence of oil and water droplets. Clay minerals act as a barrier in between these droplets, ensuring the physical-chemical stability of the system (Viseras et al., 2007a).

## **Understanding Rheology of Structured Fluids**

Rheological measurements are very useful in clarifying the internal structure of cosmetics. In addition, knowledge of the rheological properties of cosmetics is essential in designing cosmetic manufacturing machinery. Rheology of cosmetics is also important for usage standpoint. Cosmetics such as pomades, hair sticks and massage creams, depend upon tackiness and lubrication. Body powders use the lubrication effect of talc powders.
