Notes for NEET Physics Electrostatics PDF Download

The course begins with a discussion of electricity. The concept of charge is introduced, and the properties of electrical forces are compared with those of other familiar forces, such as gravitation. Coulomb's Law, along with the principle of superposition, allows for the calculation of electrostatic forces from a given charge distribution.

Electrostatic:-It is a branch of physics that deals with the phenomena and properties of stationary or slow-moving electric charges with no acceleration.
Coulomb's Law:- It states that the electro-static force of attraction or repulsion between two charged bodies is directly proportional to the product of their charges

and varies inversely as the square of the distance between the two bodies.

Electrostatics class 12 notes pdf- This is the Chapter 2nd of Class 12th Physics. Furthermore, this chapter deals with electrostatic potential and capacitance. Moreover, electrostatic potential is the amount of work that we need to move a unit positive charge from an initial point to any specific point with producing any acceleration.

Electrostatics, as the name implies, is the study of stationary electric charges. A rod of plastic rubbed with fur or a rod of glass rubbed with silk will attract small pieces of paper and is said to be electrically charged. The charge on plastic rubbed with fur is defined as negative, and the charge on glass rubbed with silk is defined as positive

Electrostatic Induction • Phenomenon of polarization of charges in a body, when a charged body is present near it, is called electrostatic induction. • In this process bodies are charged without touching them. • Charging by Induction A charged object will induce a charge on a nearby conductor. In this example, a negatively

Electrostatics - CliffsNotes

Charge is the property of matter that causes it to produce and experience electrical and magnetic effects. The study of the electrical charges at rest is called electrostatics. When both electrical and magnetic effects are present, the interaction between charges is referred to as electromagnetic. There exist two types of charges in nature : positive and negative.

Coulomb's Law of Electrostatics. Electrostatic force of interaction acting between two stationary charges is given by. $F = \frac{1}{4\pi\epsilon_0} \frac{q_1 q_2}{r^2}$. where q_1, q_2 are magnitude of point charges, r is the distance between them and ϵ_0 is permittivity of free space. Here, $\frac{1}{4\pi\epsilon_0} = (10^{-7} \text{ N - s}^2 / \text{C}^2) \text{C}^2$. Substituting value of $c = 2.99792458 \times 10^8 \text{ m/s}$,
