Aircraft Wiring for Smart People

Wire sized in American Wire Gage (AWG) world doubles or halves in cross-section every three steps in wire gage. So, if one assigns 5A as a current limit for 22AWG wire, then a 19AWG wire should be good for 10A, a 16AWG wire should be good for 20. Not quite. Two features in physics define current rating of a wire: (1) tolerable voltage drop and (2)

- Every wire segment on an aircraft should have its own unique identifier. Even the shield of shielded wire has its own unique identifier. Put simply, every conductor of current is uniquely identified. As an example, a twisted pair that is shielded and jacketed contains three conductors: the twisted pair and the outside shield.
