JSR 168 Portal - Overview - SlideShare

What is JSR 168? □ From the portlet development point of view, it is really very simple: □ You write a java class that extends GenericPortlet. □ You override/implement several methods inherited from GenericPortlet. □ You use some supporting classes/interfaces □ □ Many are analogous to their servlet equivalents Some (portletsession) actually seem to be trivial wrappers around servlet equivalents in Pluto.

Understanding the Java Portlet Specification 2.0 (JSR 286)

The Portlet Deployment Tool (PDT) is a command-line script that enables you to add JSR-168-compliant portlets to the BI Portlets Web application. 6Chapter 2 • Tools for Creating JSR-168-Compliant Portlets The basic process to deploy a portlet with the PDT is as follows: 1. Modify the build.properties file to specify the parameters for the PDT.

In JSR 168 (Portlet 1.0), the render parameters set in the processAction() method are available only in the render phase of the same portlet. By using the public render parameters feature, the render parameters set in the processAction()

method of one portlet are available in render parameters of the other portlets. Using public render parameters instead of events avoids the additional process event call.

Your development environment may dictate whether you use JSR 286 or not. In IBM's Rational Developer, for example, it can't create a JSR 286 portlet using Struts. You can build a JSR 168 portlet using Struts, though. So my bottom line is this: code to the JSR 286 standard when you can and only use JSR 168 when forced to.
