Local Government Spatial Reference Group

Spatial Information Management Toolkit Page 2 the first, is still potentially incorrect as the title implies an increase in population not a decrease. Some local government areas may have decreased in population. Possibly the best title would be Population Change by Local Government in Victoria 1990- 2001. This title conveys a lot of information in a short phrase and does not mislead the map

Local Government Spatial Information Management

The attributes in the Local Government Boundaries Dataset are Administrative Area Type, Administrative Area Name, LGA Code, Abbreviated Administrative Area Name, Proper Case Administrative Area Name and Area in square kilometres. The attribute accuracy is 98% reliable.

ALGA :: SPATIAL INFORMATION MANAGEMENT TOOLKIT

This has been a key problem even when considering state and local government organizations, but it can be even more difficult to determine how to effectively share information across the local, state and federal level. As noted by some researchers, as much as 80% of data stored by the government has a spatial component. However, differences in operational processes, the structure of the data itself and different policies regarding sharing have contributed to complexity in creating ...

Geospatial Information policy | Local Government Association

A Local Government Perspective of Spatial Data Management A column from Members of the Urban and Regional Information Systems Association By Ron Stanfield, GIS Coordinator, Montgomery County, Alabama One goal of local government could be stated as, "To provide quality service to its citizens in the most cost-efficient manner possible."

Foundation Spatial Data Framework - Spatial Information ...

Geographic Information System(GIS): a digital database in which information is stored by its spatial coordinate system, which allows for data input, storage, retrieval, management, transformation, analysis, reporting, and other activities. GIS is often envisioned as a process as much as a physical entity for data.
