growth hormone (rBGH), a synthetic version of a hormone cows produce naturally. (It's also sometimes called rBST, for recombinant bovine somatotropin.) Fewer cows, more milk

Growth hormones in meat contribute to breast cancer - Meat ...

The use of synthetic hormones in livestock exploded in part as a response to these anxieties, yet synthetic chemicals also served to increase these anxieties. Meat had powerful symbolic meaning for Americans, particularly during wartime. As the social historian Amy Bentley argues, American meat consumption was framed in gendered terms:

Modern Meat Synthetic Hormones Livestock

A report released last week by the Breast Cancer Fund has drawn attention to the link between meat consumption and incidences of breast cancer in the US. The synthetic hormones routinely injected into beef cattle in the US are a contributory factor to the development of breast cancer, the report says, while also pointing out the "association between higher lifetime consumption of grilled meats and fish and increased incidence of postmenopausal breast cancer".

CHAPTER 5 Modern Meat: Hormones in Livestock (pp. 61-82) In 1960 a Food and Drug Administration employee named Charles Durbin told a gathering of angry poultry producers, "Chemicals and drugs have revolutionized agriculture in the past 15 years.

Hormones in Beef: Myth vs. Fact - AgWeb

The Beef Hormone Dispute is one of the most intractable agricultural controversies since the establishment of the World Trade Organization. It has sometimes been called the "beef war" in the media, similarly to the UK-EU Beef war over the mad cow disease issue, creating some confusion, since these two wars overlapped in time. In 1989, the European Union banned the importation of meat that contained artificial beef growth hormones approved for use and administered in the United States ...
