Multiple Organ Failure - an overview | ScienceDirect Topics

MULTISYSTEM organ failure is a devastating condition most often associated with severe sepsis, but which can occur with other conditions such as trauma, pancreatitis, and burns. All of these conditions likely share a common pathway for the development of multiple system organ failure: diffuse activation of endothelium by proinflammatory cytokines, leukocytes, and other proteins.

Local and systemic responses are initiated by tissue damage. Respiratory failure is common in the first 72 hours after the original insult.

Multisystem Organ Failure - James Lineback - MD, FCCP ...

Multiple organ dysfunction syndrome is altered organ function in an acutely ill patient requiring medical intervention to achieve homeostasis. Although Irwin-Rippe cautions in 2005 that the use of "multiple organ failure" or "multisystem organ failure" should be avoided, both Harrison's and Cecil's medical textbooks still use the terms "multi-organ failure" and "multiple organ failure" in several chapters, and do not use "multiple organ dysfunction syndrome" at all.
