how his work with patients who have bizarre neurological disorders has shed new light on the deep architecture of the brain, and what these findings tell us about who we are, how we construct our body image, why we laugh or become depressed, why we may believe in God, how we make decisions, deceive ourselves and dream, perhaps even why we're so clever at philosophy, music and art. Some of his most notable cases:

In “The Zombie in the Brain,” Ramachandran approaches the so-called binding problem of a unified perception of (in his example) a ball—whether there is “some later place in the brain where all this information is put together”—as involving “logically flawed assumptions about the visual process” (pp. 80–81).

### **Phantoms in the Brain - Wikipedia**

Phantoms in the Brain: Probing the Mysteries of the Human Mind. V. S. Ramachandran, Sandra Blakeslee, Oliver Sacks. Neuroscientist V.S. Ramachandran is internationally renowned for uncovering answers to the deep and quirky questions of human nature that few scientists have dared to address. His bold insights about the brain are matched only by the stunning simplicity of his experiments -- using such low-tech tools as cotton swabs, glasses of water and dime-store mirrors.

But when amputations are made they get phantom limbs. Two body images in brain, one genetic unchanging and one up to date. They compete when limb amputation happens (it disturbs the equilibrium in favor of the genetic body image). Pain like all other sensory perceptions is an illusion created in the brain.
