Worksheet 50 - Geometric Sequences.ks- ia2

The main difference between recursive and explicit is that a recursive formula gives the value of a specific term based on the previous term while an explicit formula gives the value of a specific term based on the position. A sequence is an important concept in mathematics. It refers to a set of numbers placed in

is a sequence of numbers such that the difference
between two successive members of the sequence is
a constant. Geometric sequence is a sequence of
numbers such that the ratio between two successive
members of the sequence is a constant.

Recursive Formula - must know previous term *two formulas: arithmetic and geometric For an Arithmetic Sequence: $t_1 = 1$ st term $t_n = t_{n-1} + d$ For a Geometric Sequence: $t_1 = 1$ st term $t_n = r(t_{n-1})$
*Note: When writing the formula, the only thing you fill in is the 1 st term and either d or r. Explicit Formula - based on the term number.
