Out-of-band (OAST) techniques are an extremely powerful way to detect and exploit blind SQL injection, due to the highly likelihood of success and the ability to directly exfiltrate data within the out-of-band channel. For this reason, OAST techniques are often preferable even in situations where other techniques for blind exploitation do work. ...

SQL in Web Pages. SQL injection usually occurs when you ask a user for input, like their username/userid, and instead of a name/id, the user gives you an SQL statement that you will unknowingly run on your database.. Look at the following example which creates a SELECT statement by adding a variable (txtUserId) to a select string.
