The Future of Protein & the Protein of the Future in ...

The Future of Protein research project aims to delve into this complex societal challenge through an objective multi-dimensional take, aiming to build dialogue across the interconnected themes which are brought together in a holistic discussion about protein. The objective is to work towards a more comprehensive and nuanced set of answers to the difficult questions above, to help guide policy, conscientious consumers, and future research initiatives.

Bing: The Future Of Protein

The future of protein. The meat-free movement has changed the protein market for good. Dr Wayne Martindale, Associate Professor, Food Insights and Sustainability at the University of Lincoln, tells all. The meat-free market has changed everything we thought we knew about consumer habits, it has also heralded a new view of what food sustainability and integrity means for food manufacturers.

Liane Ong: Consumption of alternative proteins will take more of a trajectory like what you've seen in alternative dairy or like what you've seen with organic meats, for example. It'll continue to be a niche segment. It'll be sizable. It'll be fast growing. But in reality, it will only be 10 to 15 percent of future total consumption.

The Future Of Protein

Animal-based proteins, especially those from large land mammals—like cows—is a climatological nightmare. A 2015 study by the Johns Hopkins Center for a Livable Future found that if current meat and dairy consumption levels continue, we'd likely exceed by 2050 the catastrophic 2-degree-Celsius global temperature rise
