Read PDF Types Of Chemical Reactions Pogil Answer Key

INFORMATION. There are 5 general types of chemical reactions. Those types are synthesis (or direct combination), decomposition, single replacement, double replacement (or metathesis), and combustion. Each of the five reaction types has a unique template that helps to set it apart from the other four. The general form of each reaction is provided below.

Types Of Chemical Reactions Worksheet Pogil

Chemical reactions can only occur if the activation energy is available and the molecules are correctly aligned. Enzymes are protein molecules that lower the activation energy needed in a reaction. The substrate is very specific, the molecule will fit like a lock and key and the reaction will take place on the active site producing the new product.
