If by indicator you mean the pointer that is bolted to the timing cover and the numbers on the balancer get smaller going left to right as you stand in front of the vehicle then that would be before top dead center....assuming of course you have a clockwise rotating 460.

Timing tabs and damper TDC lines SBC - Crankshaft Coalition

A timing mark is an indicator used for setting the timing of the ignition system of an engine, typically found on the crankshaft pulley (as pictured) or the flywheel, being the largest radius rotating at crankshaft speed and therefore the place where marks at one degree intervals will be farthest apart. On older engines it is common to set the ignition timing using a timing light, which flashes in time with the ignition system (and hence engine rotation), so when shone on the timing marks ...
